EXECUTIVE SUMMARY

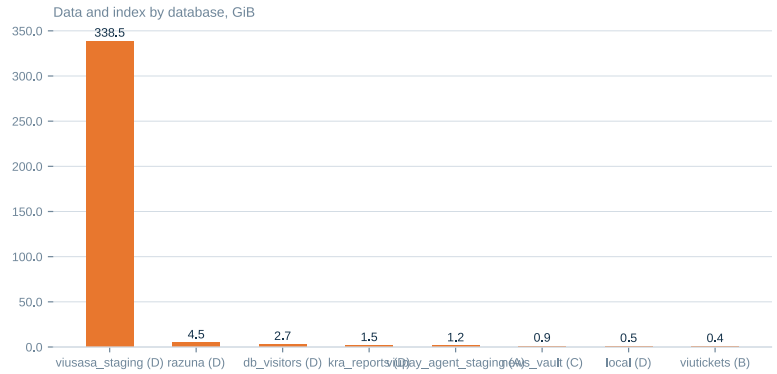

The estate is large, repetitive in places and mostly personal; reclaimable bytes are known

SITUATION	351.3 GiB sit in 20 databases and 1006 tables. 259.3m rows are held; 71 table pairs duplicate each other.
COMPLICATION	Exact duplicates are 1.5% of rows; degraded rows 23.0%; empty required fields 81.7%. 71.8% of 1.0m sampled rows carry PII markers.
QUESTION	Which cost-reduction strategies and product candidates should the estate owner take forward?
ANSWER	About 15.2 GiB (4.3% of database bytes) looks reclaimable in the databases before pricing. Priced strategies bound the monthly saving at 1,174.4 USD at reference list prices. Rights are declared at Connect, not measured by the census; every candidate is aggregate or de-identified. The decision is the estate owner's; this pack sets out the measured evidence.

01 What the estate holds and how it is conditioned

WHERE THE BYTES ARE

The largest databases hold 99.7% of the estate's bytes

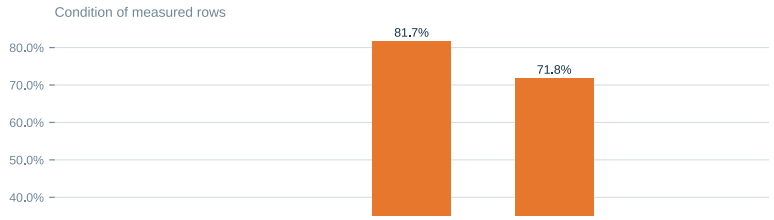

351.3 GiB sit in 20 databases and 1006 tables

`[measured] Receipt R01: Estate intelligence census eij-1b359b3cbd2e, digest-verified report (measured 2026-09-29), headline aggregates and per-database measures`

CONDITION

Exact duplicates are 1.5% of rows; degraded rows 23.0%; empty required fields 81.7%

Measures cover 63.4% of tables; the remaining ratios are estimated from stratified samples

`[estimated] Receipt R01: Estate intelligence census eij-1b359b3cbd2e, digest-verified report (measured 2026-09-29), headline aggregates and per-database measures`

PERSONAL DATA AND STALENESS

71.8% of 1.0m sampled rows carry PII markers

01 15.4% of bytes have not been written for over a year; 368 tables are empty

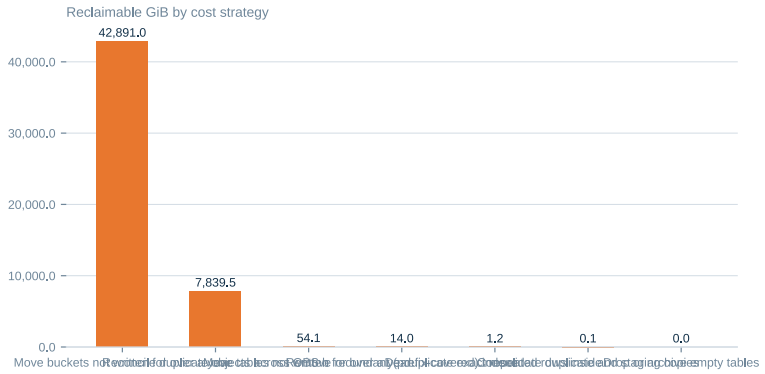

02 Dead columns are 13.0% of measured columns

03 Rights are declared at Connect, not measured by the census; every candidate is aggregate or de-identified

02 What it costs to keep, and what it could become

COST

Three strategies address 100.0% of the 50,799.8 GiB that all cost strategies reach

Priced strategies bound the monthly saving at 1,174.4 USD at reference list prices

[estimated] Receipt R02: Estate intelligence census eij-1b359b3cbd2e, cost_strategies priced at reference list prices, not the owner's invoice: Huawei Cloud RDS for MySQL cloud SSD AF-Johannesburg 0.00015 USD/GB-hour x 730 h; OBS Standard 0.023 USD/GB-month

STRATEGIES

Three costed strategies sit side by side; the estate owner chooses the order

	Move buckets not written for over a year to archive-class st	Reconcile duplicate objects across OBS buckets	Move tables not written for over a year to cold storage
Bytes addressed (GiB)	42,891.0	7,839.5	54.1
Monthly saving (USD)	986.5	180.3	5.9
Share of bytes addressed	84.4%	15.4%	0.1%

About 15.2 GiB (4.3% of database bytes) looks reclaimable in the databases before pricing

[estimated] Receipt R02: Estate intelligence census eij-1b359b3cbd2e, cost_strategies priced at reference list prices, not the owner's invoice: Huawei Cloud RDS for MySQL cloud SSD AF-Johannesburg 0.00015 USD/GB-hour x 730 h; OBS Standard 0.023 USD/GB-month

PRODUCTS

8 product candidates rank by rows, readiness and dimensions

01 Reference and master-data licensing: grade C, 87 tables, 123,394,159 rows (est.); blockers: 62.0% of supporting tables carry PII markers: de-identify or aggregate before any release · use rights are declared at Connect, not measured: a release needs its own grant and purpose

02 Content catalogue, recommendation and licensing corpus: grade C, 98 tables, 157,855,990 rows (est.); blockers: 74.0% of supporting tables carry PII markers: de-identify or aggregate before any release · use rights are declared at Connect, not measured: a release needs its own grant and purpose

03 Channel / telco engagement analytics (USSD, SMS, app): grade C, 57 tables, 116,781,903 rows (est.); blockers: 79.0% of supporting tables carry PII markers: de-identify or aggregate before any release · use rights are declared at Connect, not measured: a release needs its own grant and purpose

COVERAGE AND LIMITS

What this pack covers, what it cannot say, and what would close each gap

COVERS

20 databases, 1,006 tables and 351.3 GiB measured by census eij-1b359b3cbd2e; ratios are complete-pass where the table allowed it and stratified samples elsewhere. No row value is present in this pack.

CANNOT SAY	WHY	WHAT WOULD CLOSE IT
Duplicate, damage, empty-field and PII ratios on sampled tables	complete passes where the table allowed it, stratified samples elsewhere	a complete-pass census on the sampled tables
Rights, licences and semantic similarity	not measured; candidates are dimensional readiness only	rights declared at Connect and bound to each candidate
Connection artists_app	could not be read (MySQL GRANT pending)	owner grants read access; re-census
NAS duplication	the enumeration recorded sizes and dates, not content fingerprints	a fingerprinting pass over the NAS shares
40 of 106 OBS buckets	unreachable (NoSuchBucket / client errors)	bucket inventory reconciled with the provider
