ESTATE INTELLIGENCE · COMMISSION CLOSE

20 databases and 1,006 tables (351.3 GiB, ≈259,273,874 rows) were measured.

WHAT IS HELD

351.3 GiB of data and index sit in 20 databases and 1,006 tables.

351.3

GiB MEASURED

About 15.2 GiB (4.3%) looks reclaimable before pricing.

CONDITION

Duplication, damage and personal data are measured on the estate, not assumed.

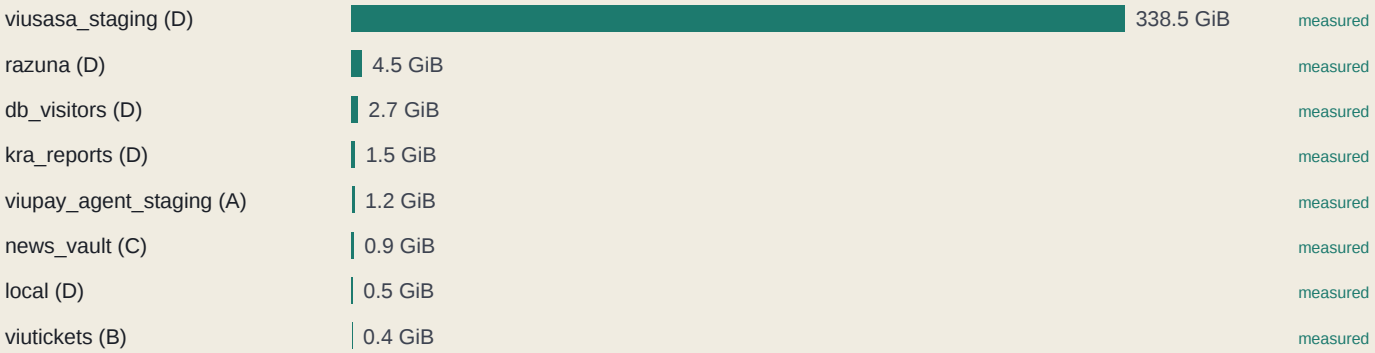

CONDITION	SHARE	BASIS
Exact duplicate rows	1.5%	complete passes or stratified samples, primary key excluded
Degraded rows	23.0%	placeholder · mojibake · truncation · invalid format
Rows with empty required-looking fields	81.7%	row-weighted across measured tables
Sampled rows with PII markers	71.8%	1,011,330 sampled rows, deterministic detector
Bytes not written for over a year	15.4%	latest timestamp column per table

1.5 % exact duplicates ESTIMATED **71.8** % rows with PII markers ESTIMATED

Receipts: eij-1b359b3cbd2e

WHERE THE BYTES ARE

Eight databases hold most of the estate.

Receipts: eij-1b359b3cbd2e

WHAT THE DATA CAN DO

Aggregate and de-identified products rank by rows, readiness and dimensions.

CANDIDATE	GRADE	TABLES	ROWS (EST.)	BLOCKERS
Reference and master-data licensing	C	87	123,394,159	62.0% of supporting tables carry PII markers: de-identify or aggregate release · use rights are declared at Connect, not measured: a release own grant and purpose
Content catalogue, recommendation and licensing corpus	C	98	157,855,990	74.0% of supporting tables carry PII markers: de-identify or aggregate release · use rights are declared at Connect, not measured: a release own grant and purpose
Channel / telco engagement analytics (USSD, SMS, app)	C	57	116,781,903	79.0% of supporting tables carry PII markers: de-identify or aggregate release · use rights are declared at Connect, not measured: a release own grant and purpose
Customer / subscriber 360 and segmentation	D	76	158,914,844	80.0% of supporting tables carry PII markers: de-identify or aggregate release · most supporting tables have not been written for over a year historical, not live
Time-series forecasting datasets	C	82	80,750,307	77.0% of supporting tables carry PII markers: de-identify or aggregate release · use rights are declared at Connect, not measured: a release own grant and purpose
Transaction & revenue analytics	C	82	80,750,307	77.0% of supporting tables carry PII markers: de-identify or aggregate release · use rights are declared at Connect, not measured: a release own grant and purpose

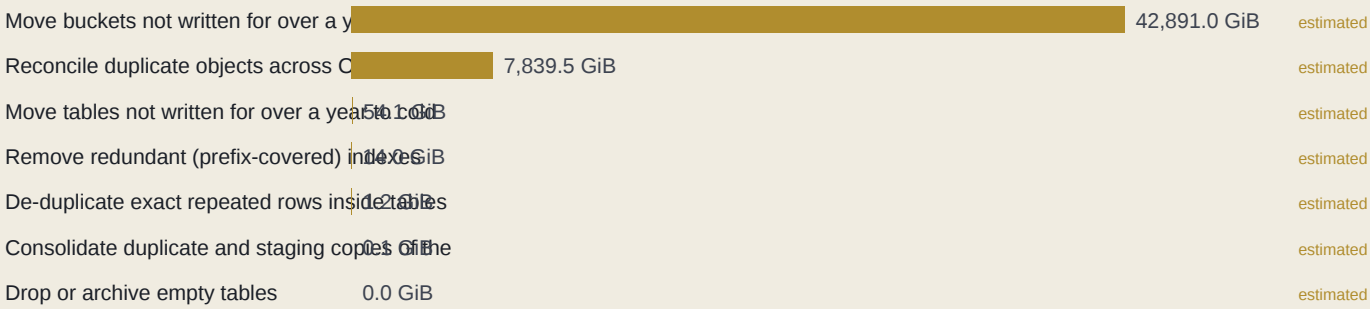

8 candidates MEASURED

Rights are declared at Connect, not measured by the census; every candidate is aggregate or de-identified.

Receipts: eij-1b359b3cbd2e

COST

Archive tiering and de-duplication carry most of the reclaimable bytes.

Priced with database storage at USD 0.1095/GB-month and object storage at USD 0.023/GB-month (reference list prices, not the own Huawei Cloud RDS for MySQL cloud SSD AF-Johannesburg 0.00015 USD/GB-hour x 730 h; OBS Standard 0.023 USD/GB-month); o between strategies are possible, so the total is an upper bound.

Receipts: eij-1b359b3cbd2e · cr-f1415e395361 · cr-cf4eef79995b

PRICED

Priced strategies bound the monthly saving from above.

1,174.4

USD / month ESTIMATED

Demoted: only a measured figure renders at landmark size.

Upper bound at reference list prices; overlaps between strategies are possible.

OBJECT AND FILE ESTATE

Object storage dwarfs the databases; duplication is measured where fingerprints exist.

STORE	UNITS	BYTES	DUPLICATE CANDIDATES
OBS buckets	22,975,591 objects	130.3 TiB	1,139,768 (5.0%)
NAS shares	1,456,787 files	43.6 TiB	no fingerprints in this pass

133,444.4 GiB in OBS MEASURED

Receipts: eij-1b359b3cbd2e · cr-f1415e395361 · cr-cf4eef79995b

COVERAGE AND LIMITS

What this deck covers, and what it does not

Covered basis: `eij-1b359b3cbd2e`

REASON	STATEMENT	CLOSING CONDITION
`sampled_only`	Duplicate, damage, empty-field and PII ratios come from complete passes where the table allowed it and stratified samples elsewhere.	A complete-pass census on tables.
`rights_withheld`	Rights, licences and semantic similarity were not measured; candidates are dimensional readiness only.	Rights declared at Connect each candidate.
`blocked_source`	Connection artists_app could not be read (MySQL GRANT pending).	Owner grants read access;
`unmeasured`	NAS duplication is unmeasured: the enumeration recorded sizes and dates, not content fingerprints.	A fingerprinting pass over th shares.
`blocked_source`	40 of 106 OBS buckets were unreachable (NoSuchBucket / client errors).	Bucket inventory reconciled provider.
